Objective

Analyze D-Mart sales data to identify performance trends, customer purchasing behavior, product category performance, and business growth opportunities.

Dataset Includes

- Orders & Revenue
- Customers & Segments
- Products & Categories
- Regions & Profit

The 5W Analysis Framework

A structured approach to understanding the scope and context of D-Mart's sales performance through five key analytical dimensions.

The 5 Why Analysis

Business Problem

Profitability is lower than expected despite high sales.

📌 **Root Cause:** Overdependence on discount-driven sales strategy.

Identifying the Core Issues

Problem: Declining profit margins across key segments despite sustained sales activity.

Each root cause contributes to margin erosion independently, requiring coordinated strategic interventions to reverse the trend.

Fishbone Diagram: Low Profitability

The Ishikawa diagram categorizes contributing factors across six operational dimensions, revealing systemic issues beyond surface-level symptoms.

Each category contains multiple causes that converge on the central problem of low profitability, highlighting areas for targeted intervention.

Product Category Portfolio

Strategic Recommendations

Stars

Invest in scaling capacity for grocery essentials to sustain dominance.

Cash Cows

Maximize returns and cross-subsidize growth categories.

Question Marks

Test selective promotion before committing further resources.

Dogs

Phase out or liquidate slow movers to release capital.

Five Major Findings

Revenue Concentration

Top-selling category contributes the highest revenue share.

Regional Imbalance

A few regions generate the majority of total profits.

Discount Impact

Excessive discounts are negatively impacting profit margins.

Loyalty Value

Repeat customers drive a significant portion of revenue.

Margin Trap

Certain products show high sales volume but minimal profit.

Recommendations

Priority Actions

Shift focus from volume-driven to margin-driven growth by rebalancing the product mix and tightening discount governance.

Empower teams with real-time analytics to respond dynamically to demand signals and competitive pressures.

CONCLUSION

Transforming Retail Decisions Through Data Analytics

Data analytics identified sales patterns and profitability challenges. Root causes were traced through 5 Why and Fishbone Analysis. Strategic recommendations can improve both revenue and profit performance.

1

Predictive Sales Forecasting

Anticipate demand with statistical models.

2

Customer Segmentation

Tailor offers to high-value segments.

3

AI-Based Recommendations

Automate pricing and cross-sell decisions.

4

Demand Forecasting Models

Optimize inventory with predictive accuracy.
